A summary and latest graphics below the fold.

---

### Latest Developments:

1) **Plateau production** - Both the International Energy Agency (IEA) and Energy Information Administration (EIA) figures show that the plateau of global liquids production that began in 2005 recently ended due to a large production increase of 1.4 million b/d in September/October. This production increase has been sustained during October/November.

2) **Total liquids** - In November world production of total liquids increased by 55,000 barrels per day from October according to the latest figures of the International Energy Agency (IEA). Resulting in total world liquids production of 86.55 million b/d, which is the all time maximum liquids production.

3) **Conventional crude** - Latest available figures from the Energy Information Administration (EIA) show that crude oil production including lease condensates increased by 891,000 b/d from August to September. Total production in September was estimated at 73.49 million b/d, which is

800,000 b/d lower than the all time high crude oil production of 74.30 million b/d reached in May 2005.
