Worldwide concern is growing over high oil prices, the security of supply of fossil fuels and its impact on many sectors of our society. Such concerns voiced at the oil drum over the past years are becoming part of the mainstream energy discussion. On 21 & 22 January 2009 a major business conference will be held in the Netherlands in which I am involved as an advisor in my role as President of ASPO Netherlands.

I invite you to come and listen to top executives and leaders from many industrial sectors who will explore the effects of high oil prices in their field of expertise or industry. Day 1 is dealing with political and macro economic aspects of changing oil supplies. Day 2 is teaching more about specific economic sectors, like Transport & Infrastructure, Food & Agriculture, Energy Systems and Chemicals & Materials.

There will be many speakers including Maria van der Hoeven (Dutch Minister of Economic Affairs), Matthew Simmons (invited), Peter de Wit (President Shell Netherlands), Kjell Aleklett (ASPO International), Jeremy Tomkinson (CEO The National Non-Food Crops Centre), Jörg Schindler (ASPO Germany) and Ger Bemer (CEO Royal Nedalco). For Conference Agenda and Registration, go to the [the Permanent Oil Crisis website](#).

Under the fold, find the highlights from the program. Come to Amsterdam!

Plenary sessions on Wednesday, 21 January on political and macro economic aspects of changing oil supplies.

Presentations will include "Sustainable Energy for the Automotive Sector", "The oil export end game", "A geo-political perspective on the future of oil", "Oil market developments to 2030", "Limits to growth for tradition transportation fuels: can we find a timely substitute?", "Post oil energy supply: an investment opportunity", "Relationship between fossil fuel depletion and climate policy", "World food security and bioenergy policy".

Parallel sessions on Thursday, 22 January on Transport and Infrastructure, Chemicals and Materials, Food and Agriculture, Energy Systems, Coal and CCS, and Energy Investments

Presentations will include "Impact of energy costs and availability on the supply chain of food production and distribution", "Is electrification together with it's sources a replacement for oil and gas", "White biotechnology: replacing black gold?", "When plastics go green: technologies, markets & policies", "How to realize a clean and secure energy system", "Underground coal
